

# STRENGTH IN PEERS COVID: Beyond Barriers Project

## Updated 2023-2024 COVID-19 Vaccine

### What is different about the updated 2023-2024 COVID vaccine?

The vaccine is based on a variant called XBB.1.5 (a subvariant of Omicron), the variant that is causing most of the COVID cases in the United States. The vaccine cross-reacts with other variants (including EG.5 and BA.2.86) that are also circulating, so it will provide some protection against those variants. Everyone age 6 months and older should get at least one dose of the updated 2023-2024 COVID-19 vaccine. Depending on your age and health status, you may be recommended to get additional doses of the updated COVID-19 vaccine. Ask your health care provider today.
